

EDISON SPACE & ASSETS

6.5 Million sq. ft.— Understanding Real Estate, Space, and Assets in a Real- Time Solution for Southern California Edison

“ARCHIBUS ALLOWS US TO UNDERSTAND HOW OUR DEPARTMENTS ARE TRULY UTILIZING OUR BUILDINGS.”

—David Kiyohara, SCE Corporate Facilities Project Manager

Southern California Edison (SCE) wanted a single point system to report on their multiple data sets governing siloed information.

FMP’s solution was to create a web portal tied to mobility to house all information required by the SCE Compliance team. This allowed their team for the first time to be able to capture, update, demonstrate use, and report to management that all As-Builts, Space Allocation, Assets, and Signage items are within SCE required protocol.

The results?

In only four months, FMP was able to capture 3 million sq. ft. of office-centric space by reviewing processes and protocol using Connectors and an infield team.

continued....

Tools used:

- ARCHIBUS
- Space Inventory & Performance
- Space Personnel
- Asset Portal
- Work Order Maintenance
- IPAD
- FieldFlex Mobility with red-lining
- Edison Space & Assets

FMP ARCHIBUS Solution Benefits

Mobility is changing the speed and accuracy of today's office. Southern California Edison Corporate Facilities now have the tools through FMP to audit, adjust, and direct verses having to always react to the ever-changing requirements of their internal clients and management.

Using FMP knowledge to connect to multiple data sources allows a complete team approach for SCE. Data resides within existing applications, yet is shared through ARCHIBUS connectors to confirm validity and support reporting.

The end result:

Edison is saving time, money, and effort using FMP knowledge and ARCHIBUS.
